Blind Measuring Form: roman and roller

Please read the guidance notes below before measuring and call us if you have any questions or would like something made that's not detailed.

BLINDS

Blind type: roman blind or roller blind

Is the blind to be fitted: inside the recess or outside the recess

Blinds to be fitted inside the recess:

Exact recess width:.....cm (see notes below)

Exact recess height:.....cm (see notes below)

Blinds to be fitted outside the recess:

Exact blind width:.....cm (see notes below)*

Exact blind height:.....cm (see notes below)

*for a roller blind this measurement will include the fittings. Fabric will be slightly narrower.

Roman Blind Lining Required: blackout - cotton sateen - thermal
blackout + interlining - cotton sateen + interlining

Roller Blind Backing Required: blackout or standard

Cords: right or left

Fabric Design & Colour

Option 1 Design Name:..... colour:.....

Option 2 Design Name:..... colour:.....

Option 3 Design Name:..... colour:.....

MEASURING:

Recess width for blinds being fitted inside the recess – measure close to the glass, where the blind will be fitted, at the top of the recess, half way down and at the sill. Give us the smallest measurement.

Recess height for blinds being fitted inside the recess – measure close to the glass, where the blind will be fitted, at the right of the recess, left and centre. Give us the smallest measurement.

Roman Blinds being fitted outside the recess – recommend fitting 15cm above top of recess, particularly if the blind is short and wide, so blind stacks over brick, not glass, to minimise light loss.

Roman Blinds being fitted outside the recess – extend 10cm past recess, each side, if possible.

Roman Blinds – contrast sides, inserts and fabric blocking available, please call for details if required.
